

Backup — Z1 full results gallery

every diagnostic and result figure of the pipeline, in processing order

- Dataset: the K-line selection window
- Example grids: LP + fit and raw vs fit, event $\times$ channel
- Fit diagnostics: NRMSE, fitted pretrigger, τ_{rise} / τ_{fall} distributions
- Aligned fans: no cut $\rightarrow$ $\text{NRMSE} \leq 0.4 \rightarrow + \tau_{\text{rise}} \leq 0.3$ ms; kept vs rejected; measured traces
- Special populations: NRMSE-rejected events, well-fit slow-rise events
- Templates: PCA nxm0–4 per channel, summed PT / PS1 / PS2

Z1 · K-line selection window

figure: kline_zip1.png

Summed PTOFamps spectrum of Z1; red line = Prof. Saab's 10.37 keV K-line position; the $\times/\div 1.35$ window around it is the event selection; everything inside is cached raw.

Z1 · fit_examples — LP trace vs 2-exp fit (1/10)

figure: zip1_fit_examples.png — event rows 1–3 of 15, left half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (2/10)

figure: zip1_fit_examples.png — event rows 1–3 of 15, right half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (3/10)

figure: zip1_fit_examples.png — event rows 4–6 of 15, left half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (4/10)

figure: zip1_fit_examples.png — event rows 4–6 of 15, right half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (5/10)

figure: zip1_fit_examples.png — event rows 7–9 of 15, left half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (6/10)

figure: zip1_fit_examples.png — event rows 7–9 of 15, right half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (7/10)

figure: zip1_fit_examples.png — event rows 10–12 of 15, left half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (8/10)

figure: zip1_fit_examples.png — event rows 10–12 of 15, right half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (9/10)

figure: zip1_fit_examples.png — event rows 13–15 of 15, left half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · fit_examples — LP trace vs 2-exp fit (10/10)

figure: zip1_fit_examples.png — event rows 13–15 of 15, right half of the channels

First 15 cached events × all channels; blue = 100 kHz LP trace, red = 2-exp fit. A real event fits well in every channel at once; a noise trigger fails across the whole row.

Z1 · raw_vs_fit_examples — raw trace vs fit (1/10)

figure: zip1_raw_vs_fit_examples.png — event rows 1–3 of 15, left half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (2/10)

figure: zip1_raw_vs_fit_examples.png — event rows 1–3 of 15, right half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (3/10)

figure: zip1_raw_vs_fit_examples.png — event rows 4–6 of 15, left half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (4/10)

figure: zip1_raw_vs_fit_examples.png — event rows 4–6 of 15, right half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (5/10)

figure: zip1_raw_vs_fit_examples.png — event rows 7–9 of 15, left half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (6/10)

figure: zip1_raw_vs_fit_examples.png — event rows 7–9 of 15, right half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (7/10)

figure: zip1_raw_vs_fit_examples.png — event rows 10–12 of 15, left half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (8/10)

figure: zip1_raw_vs_fit_examples.png — event rows 10–12 of 15, right half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (9/10)

figure: zip1_raw_vs_fit_examples.png — event rows 13–15 of 15, left half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · raw_vs_fit_examples — raw trace vs fit (10/10)

figure: zip1_raw_vs_fit_examples.png — event rows 13–15 of 15, right half of the channels

Same 15 events × all channels; gray = raw unfiltered trace, blue = LP, red = fit, per-panel NRMSE top-right. Noise vs pulse size is directly visible in the raw data.

Z1 · nrmse — NRMSE distribution per channel (1/5)

figure: zip1_nrmse.png — channel panels 1–2 of 9, top to bottom

NRMSE = $\text{RMS}(\text{fit residual}) / \text{fitted peak}$, log-log. Bimodal: good fits vs noise triggers; the valley at ≈ 0.4 sets quality cut 1.

Z1 · nrmse — NRMSE distribution per channel (2/5)

figure: zip1_nrmse.png — channel panels 3–4 of 9, top to bottom

NRMSE = $\text{RMS}(\text{fit residual}) / \text{fitted peak}$, log-log. Bimodal: good fits vs noise triggers; the valley at ≈ 0.4 sets quality cut 1.

Z1 · nrmse — NRMSE distribution per channel (3/5)

figure: zip1_nrmse.png — channel panels 5–6 of 9, top to bottom

NRMSE = $\text{RMS}(\text{fit residual}) / \text{fitted peak}$, log-log. Bimodal: good fits vs noise triggers; the valley at ≈ 0.4 sets quality cut 1.

Z1 · nrmse — NRMSE distribution per channel (4/5)

figure: zip1_nrmse.png — channel panels 7–8 of 9, top to bottom

NRMSE = $\text{RMS}(\text{fit residual}) / \text{fitted peak}$, log-log. Bimodal: good fits vs noise triggers; the valley at ≈ 0.4 sets quality cut 1.

Z1 · nrmse — NRMSE distribution per channel (5/5)

figure: zip1_nrmse.png — channel panels 9–9 of 9, top to bottom

NRMSE = $\text{RMS}(\text{fit residual}) / \text{fitted peak}$, log-log. Bimodal: good fits vs noise triggers; the valley at ≈ 0.4 sets quality cut 1.

Z1 · pretrigger — fitted onset per channel (1/5)

figure: zip1_pretrigger.png — channel panels 1–2 of 9, top to bottom

The onset is a FREE fit parameter; pinning it inside the fit would bias every other parameter.

Z1 · pretrigger — fitted onset per channel (2/5)

figure: zip1_pretrigger.png — channel panels 3–4 of 9, top to bottom

The onset is a FREE fit parameter; pinning it inside the fit would bias every other parameter.

Z1 · pretrigger — fitted onset per channel (3/5)

figure: zip1_pretrigger.png — channel panels 5–6 of 9, top to bottom

The onset is a FREE fit parameter; pinning it inside the fit would bias every other parameter.

Z1 · pretrigger — fitted onset per channel (4/5)

figure: zip1_pretrigger.png — channel panels 7–8 of 9, top to bottom

The onset is a FREE fit parameter; pinning it inside the fit would bias every other parameter.

Z1 · pretrigger — fitted onset per channel (5/5)

figure: zip1_pretrigger.png — channel panels 9–9 of 9, top to bottom

The onset is a FREE fit parameter; pinning it inside the fit would bias every other parameter.

Z1 · time_constants — τ_{rise} / τ_{fall} per channel (1/5)

figure: zip1_time_constants.png — channel panels 1–2 of 9, top to bottom

Fast-pulse population at $\tau_{\text{rise}} \approx 0.1$ ms; isolated spikes at the parameter bounds are noise fits pinned at the fit limits, removed by the NRMSE cut.

Z1 · time_constants — τ_{rise} / τ_{fall} per channel (2/5)

figure: zip1_time_constants.png — channel panels 3–4 of 9, top to bottom

Fast-pulse population at $\tau_{\text{rise}} \approx 0.1$ ms; isolated spikes at the parameter bounds are noise fits pinned at the fit limits, removed by the NRMSE cut.

Z1 · time_constants — τ_{rise} / τ_{fall} per channel (3/5)

figure: zip1_time_constants.png — channel panels 5–6 of 9, top to bottom

Fast-pulse population at $\tau_{\text{rise}} \approx 0.1$ ms; isolated spikes at the parameter bounds are noise fits pinned at the fit limits, removed by the NRMSE cut.

Z1 · time_constants — τ_{rise} / τ_{fall} per channel (4/5)

figure: zip1_time_constants.png — channel panels 7–8 of 9, top to bottom

Fast-pulse population at $\tau_{\text{rise}} \approx 0.1$ ms; isolated spikes at the parameter bounds are noise fits pinned at the fit limits, removed by the NRMSE cut.

Z1 · time_constants — τ_{rise} / τ_{fall} per channel (5/5)

figure: zip1_time_constants.png — channel panels 9–9 of 9, top to bottom

Fast-pulse population at $\tau_{\text{rise}} \approx 0.1$ ms; isolated spikes at the parameter bounds are noise fits pinned at the fit limits, removed by the NRMSE cut.

Z1 · fitted_curves_overlay — fan, no cut (1/5)

figure: zip1_fitted_curves_overlay.png — channel panels 1–2 of 9, top to bottom

Every fit_ok fitted curve at the common pretrigger 16050, peak-normalized. Pure shape distribution; the broad slow curves are noise fits that the cuts remove.

Z1 · fitted_curves_overlay — fan, no cut (2/5)

figure: zip1_fitted_curves_overlay.png — channel panels 3–4 of 9, top to bottom

Every fit_ok fitted curve at the common pretrigger 16050, peak-normalized. Pure shape distribution; the broad slow curves are noise fits that the cuts remove.

Z1 · fitted_curves_overlay — fan, no cut (3/5)

figure: zip1_fitted_curves_overlay.png — channel panels 5–6 of 9, top to bottom

Every fit_ok fitted curve at the common pretrigger 16050, peak-normalized. Pure shape distribution; the broad slow curves are noise fits that the cuts remove.

Z1 · fitted_curves_overlay — fan, no cut (4/5)

figure: zip1_fitted_curves_overlay.png — channel panels 7–8 of 9, top to bottom

Every fit_ok fitted curve at the common pretrigger 16050, peak-normalized. Pure shape distribution; the broad slow curves are noise fits that the cuts remove.

Z1 · fitted_curves_overlay — fan, no cut (5/5)

figure: zip1_fitted_curves_overlay.png — channel panels 9–9 of 9, top to bottom

Every fit_ok fitted curve at the common pretrigger 16050, peak-normalized. Pure shape distribution; the broad slow curves are noise fits that the cuts remove.

Z1 · fitted_curves_overlay — after $\text{NRMSE} \leq 0.4$ (1/5)

figure: zip1_fitted_curves_overlay_nrmse0.4.png — channel panels 1–2 of 9, top to bottom

Same fan after quality cut 1: the noise fan collapses, the fast-pulse bundle remains.

Z1 · fitted_curves_overlay — after $\text{NRMSE} \leq 0.4$ (2/5)

figure: zip1_fitted_curves_overlay_nrmse0.4.png — channel panels 3–4 of 9, top to bottom

Same fan after quality cut 1: the noise fan collapses, the fast-pulse bundle remains.

Z1 · fitted_curves_overlay — after $\text{NRMSE} \leq 0.4$ (3/5)

figure: zip1_fitted_curves_overlay_nrmse0.4.png — channel panels 5–6 of 9, top to bottom

Same fan after quality cut 1: the noise fan collapses, the fast-pulse bundle remains.

Z1 · fitted_curves_overlay — after $\text{NRMSE} \leq 0.4$ (4/5)

figure: zip1_fitted_curves_overlay_nrmse0.4.png — channel panels 7–8 of 9, top to bottom

Same fan after quality cut 1: the noise fan collapses, the fast-pulse bundle remains.

Z1 · fitted_curves_overlay — after $\text{NRMSE} \leq 0.4$ (5/5)

figure: zip1_fitted_curves_overlay_nrmse0.4.png — channel panels 9–9 of 9, top to bottom

Same fan after quality cut 1: the noise fan collapses, the fast-pulse bundle remains.

Z1 · fitted_curves_overlay — after both cuts (1/5)

figure: zip1_fitted_curves_overlay_nrmse0.4_trise0.30ms.png — channel panels 1–2 of 9, top to bottom

After $\text{NRMSE} \leq 0.4$ AND $\tau_{\text{rise}} \leq 0.3$ ms — the exact PCA input population: the clean fast-pulse bundle only.

Z1 · fitted_curves_overlay — after both cuts (2/5)

figure: zip1_fitted_curves_overlay_nrmse0.4_trise0.30ms.png — channel panels 3–4 of 9, top to bottom

After $\text{NRMSE} \leq 0.4$ AND $\tau_{\text{rise}} \leq 0.3$ ms — the exact PCA input population: the clean fast-pulse bundle only.

Z1 · fitted_curves_overlay — after both cuts (3/5)

figure: zip1_fitted_curves_overlay_nrmse0.4_trise0.30ms.png — channel panels 5–6 of 9, top to bottom

After $\text{NRMSE} \leq 0.4$ AND $\tau_{\text{rise}} \leq 0.3$ ms — the exact PCA input population: the clean fast-pulse bundle only.

Z1 · fitted_curves_overlay — after both cuts (4/5)

figure: zip1_fitted_curves_overlay_nrmse0.4_trise0.30ms.png — channel panels 7–8 of 9, top to bottom

After $\text{NRMSE} \leq 0.4$ AND $\tau_{\text{rise}} \leq 0.3$ ms — the exact PCA input population: the clean fast-pulse bundle only.

Z1 · fitted_curves_overlay — after both cuts (5/5)

figure: zip1_fitted_curves_overlay_nrmse0.4_trise0.30ms.png — channel panels 9–9 of 9, top to bottom

After $\text{NRMSE} \leq 0.4$ AND $\tau_{\text{rise}} \leq 0.3$ ms — the exact PCA input population: the clean fast-pulse bundle only.

Z1 · overlay_fan_cut — kept vs rejected fits (1/5)

figure: zip1_overlay_fan_cut_nrmse0.4.png — channel panels 1–2 of 9, top to bottom

Gray-blue = aligned measured traces; green = fits with $\text{NRMSE} \leq 0.4$ (kept); red = $\text{NRMSE} > 0.4$ (cut away). Median NRMSE and counts of both populations stamped per channel.

Z1 · overlay_fan_cut — kept vs rejected fits (2/5)

figure: zip1_overlay_fan_cut_nrmse0.4.png — channel panels 3–4 of 9, top to bottom

Gray-blue = aligned measured traces; green = fits with $\text{NRMSE} \leq 0.4$ (kept); red = $\text{NRMSE} > 0.4$ (cut away). Median NRMSE and counts of both populations stamped per channel.

Z1 · overlay_fan_cut — kept vs rejected fits (3/5)

figure: zip1_overlay_fan_cut_nrmse0.4.png — channel panels 5–6 of 9, top to bottom

Gray-blue = aligned measured traces; green = fits with $\text{NRMSE} \leq 0.4$ (kept); red = $\text{NRMSE} > 0.4$ (cut away). Median NRMSE and counts of both populations stamped per channel.

Z1 · overlay_fan_cut — kept vs rejected fits (4/5)

figure: zip1_overlay_fan_cut_nrmse0.4.png — channel panels 7–8 of 9, top to bottom

Gray-blue = aligned measured traces; green = fits with $\text{NRMSE} \leq 0.4$ (kept); red = $\text{NRMSE} > 0.4$ (cut away). Median NRMSE and counts of both populations stamped per channel.

Z1 · overlay_fan_cut — kept vs rejected fits (5/5)

figure: zip1_overlay_fan_cut_nrmse0.4.png — channel panels 9–9 of 9, top to bottom

Gray-blue = aligned measured traces; green = fits with $\text{NRMSE} \leq 0.4$ (kept); red = $\text{NRMSE} > 0.4$ (cut away). Median NRMSE and counts of both populations stamped per channel.

Z1 · aligned_overlay — aligned measured traces (1/5)

figure: zip1_lp_aligned_overlay.png — channel panels 1–2 of 9, top to bottom

Blue = measured LP traces shifted by (fitted pretrigger – 16050); red = mean of all fit_ok events; orange = NRMSE-weighted mean of the fitted curves. Rise edges line up at 16050.

Z1 · aligned_overlay — aligned measured traces (2/5)

figure: zip1_lp_aligned_overlay.png — channel panels 3–4 of 9, top to bottom

Blue = measured LP traces shifted by (fitted pretrigger – 16050); red = mean of all fit_ok events; orange = NRMSE-weighted mean of the fitted curves. Rise edges line up at 16050.

Z1 · aligned_overlay — aligned measured traces (3/5)

figure: zip1_lp_aligned_overlay.png — channel panels 5–6 of 9, top to bottom

Blue = measured LP traces shifted by (fitted pretrigger – 16050); red = mean of all fit_ok events; orange = NRMSE-weighted mean of the fitted curves. Rise edges line up at 16050.

Z1 · aligned_overlay — aligned measured traces (4/5)

figure: zip1_lp_aligned_overlay.png — channel panels 7–8 of 9, top to bottom

Blue = measured LP traces shifted by (fitted pretrigger – 16050); red = mean of all fit_ok events; orange = NRMSE-weighted mean of the fitted curves. Rise edges line up at 16050.

Z1 · aligned_overlay — aligned measured traces (5/5)

figure: zip1_lp_aligned_overlay.png — channel panels 9–9 of 9, top to bottom

Blue = measured LP traces shifted by (fitted pretrigger – 16050); red = mean of all fit_ok events; orange = NRMSE-weighted mean of the fitted curves. Rise edges line up at 16050.

Z1 · slow_rise_events — NRMSE-rejected events (1/10)

figure: zip1_slow_rise_events.png — event rows 1–3 of 15, left half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (2/10)

figure: zip1_slow_rise_events.png — event rows 1–3 of 15, right half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (3/10)

figure: zip1_slow_rise_events.png — event rows 4–6 of 15, left half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (4/10)

figure: zip1_slow_rise_events.png — event rows 4–6 of 15, right half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (5/10)

figure: zip1_slow_rise_events.png — event rows 7–9 of 15, left half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (6/10)

figure: zip1_slow_rise_events.png — event rows 7–9 of 15, right half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (7/10)

figure: zip1_slow_rise_events.png — event rows 10–12 of 15, left half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (8/10)

figure: zip1_slow_rise_events.png — event rows 10–12 of 15, right half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (9/10)

figure: zip1_slow_rise_events.png — event rows 13–15 of 15, left half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · slow_rise_events — NRMSE-rejected events (10/10)

figure: zip1_slow_rise_events.png — event rows 13–15 of 15, right half of the channels

Events with median NRMSE > 0.4 across channels: the raw traces show no pulse in any channel — the rejected population is noise triggers, not physics.

Z1 · shadow_events — well-fit slow-rise events (1/10)

figure: zip1_shadow_events.png — event rows 1–3 of 15, left half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (2/10)

figure: zip1_shadow_events.png — event rows 1–3 of 15, right half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (3/10)

figure: zip1_shadow_events.png — event rows 4–6 of 15, left half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (4/10)

figure: zip1_shadow_events.png — event rows 4–6 of 15, right half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (5/10)

figure: zip1_shadow_events.png — event rows 7–9 of 15, left half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (6/10)

figure: zip1_shadow_events.png — event rows 7–9 of 15, right half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (7/10)

figure: zip1_shadow_events.png — event rows 10–12 of 15, left half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (8/10)

figure: zip1_shadow_events.png — event rows 10–12 of 15, right half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (9/10)

figure: zip1_shadow_events.png — event rows 13–15 of 15, left half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · shadow_events — well-fit slow-rise events (10/10)

figure: zip1_shadow_events.png — event rows 13–15 of 15, right half of the channels

Median NRMSE ≤ 0.4 AND median $\tau_{\text{rise}} > 0.2$ ms: genuinely slow, well-fit pulses — kept, and exactly what the NxM multi-templates are for.

Z1 · deliverables/nxm — PCA templates nxm0–4 (1/5)

figure: zip1_pca_templates.png — channel panels 1–2 of 9, top to bottom

nxm0 = mean curve; nxm1–4 = PCA components (oscillating basis vectors, may be negative), all peak-normalized; population = $\text{fit_ok} + \text{NRMSE} \leq 0.4 + \tau_{\text{rise}} \leq 0.3 \text{ ms}$.

Z1 · deliverables/nxm — PCA templates nxm0–4 (2/5)

figure: zip1_pca_templates.png — channel panels 3–4 of 9, top to bottom

nxm0 = mean curve; nxm1–4 = PCA components (oscillating basis vectors, may be negative), all peak-normalized; population = $\text{fit_ok} + \text{NRMSE} \leq 0.4 + \tau_{\text{rise}} \leq 0.3 \text{ ms}$.

Z1 · deliverables/nxm — PCA templates nxm0–4 (3/5)

figure: zip1_pca_templates.png — channel panels 5–6 of 9, top to bottom

nxm0 = mean curve; nxm1–4 = PCA components (oscillating basis vectors, may be negative), all peak-normalized; population = $\text{fit_ok} + \text{NRMSE} \leq 0.4 + \tau_{\text{rise}} \leq 0.3 \text{ ms}$.

Z1 · deliverables/nxm — PCA templates nxm0–4 (4/5)

figure: zip1_pca_templates.png — channel panels 7–8 of 9, top to bottom

nxm0 = mean curve; nxm1–4 = PCA components (oscillating basis vectors, may be negative), all peak-normalized; population = $\text{fit_ok} + \text{NRMSE} \leq 0.4 + \tau_{\text{rise}} \leq 0.3 \text{ ms}$.

Z1 · deliverables/nxm — PCA templates nxm0–4 (5/5)

figure: zip1_pca_templates.png — channel panels 9–9 of 9, top to bottom

nxm0 = mean curve; nxm1–4 = PCA components (oscillating basis vectors, may be negative), all peak-normalized; population = fit_ok + NRMSE $\leq$ 0.4 + $\tau_{\text{rise}} \leq$ 0.3 ms.

Z1 · 1x1 summed templates PT / PS1 / PS2

figures: deliverables/1x1/plots/{PT,PS1,PS2}/zip1_*.png

Single-template (1x1) summed curves: peak-normalized average of the per-channel nxm0 templates — PT = all channels, PS1 / PS2 = side-1 / side-2 only.

Z1 PT
